

ABOUT APPSOLVE AGRI

APPSolve Agri originated due to a need for software systems in Southern African countries specialising in warehouse receipts and micro-financing.

The software system started as a simple database for capturing and storing farmer information and documents. The system grew to accommodate multiple agricultural commodity and finance industry needs.

APPSolve Agri offers a suite of applications that can be used individually or simultaneously and provides all types of projects, small or large, irrespective of different requirements.

APPSolve Agri aims to provide a suitable software solution to their clients that accommodates all the general and specific needs of the agricultural environment. It tracks products from the farmers through the value chain to the final consumer. APPSolve Agri aims to provide a suitable software system to their clients that accommodate all the agricultural environment's general and specific needs. It tracks products from the farmers through the value chain to the final consumer.

The APPSolve Agri application provides an online platform to store and analyse the data and upload documents of any type for any stakeholder, business and/or farming operation in terms of production, loans, transportation, storage, and sales.

This application can also integrate with most other software systems, such as financial packages, ensuring no double capturing of data.

innovation

AWARDS

Oracle awarded AfricaTradeApp (now known as APPSolve Agri) its 2015 and 2016 Global Excellence Award for sustainability innovation.

This is international recognition of the application's value to the economic and social upliftment of the local communities in these countries.

APPSolve Agri
Tracking Product and Profit

TRACKING PRODUCT AND PROFIT

APPSolve Agri specialises in agricultural system development and implementation throughout the value chain

**DATABASE
MICRO-FINANCING
WAREHOUSE RECEIPT
TRANSPORT
FARM MANAGEMENT
FINANCING
FINANCIAL SYSTEM INTEGRATION**

APPLICATIONS

DATABASE

The **database application** makes provision for registering farmers, individuals, staff, associations and/or companies on the system coupled with the relevant data records for a quick and easy reference. The system allows for uploading any documentation stored in the cloud for easy access anywhere in the world. Various reports can be run for the stakeholders loaded on the system.

MICRO-FINANCING

The **micro-financing application** gives the user access to all the tools to capture, calculate, report, and manage the financial profiles of countless clients. This application is specially designed to provide the user with all the functionalities needed for the unique nature of micro-financing and agricultural financing. Various reports are available to manage the micro-loans and the business sustainably.

WAREHOUSE RECEIPT

The **warehouse receipt application** enables the user to create delivery notes, warehouse receipts (WR) and invoices as an electronic copy and print out a pdf hard copy. This application allows for the management, processing, and sale of various products for various companies or individuals while having the traceability of all products throughout the process. Multiple reports can manage stock levels and sales throughout a season, making it possible to make “real-time” evaluations and decisions. This application also caters for WR/collateral financing with build-in securities.

TRANSPORT

The **transport application** allows the user to move products between numerous locations, and multiple loads can be loaded on a single transport dispatch note. The system enables users to see the date and time a product is dispatched and the date and time the product is offloaded at multiple destinations.

FARM MANAGEMENT

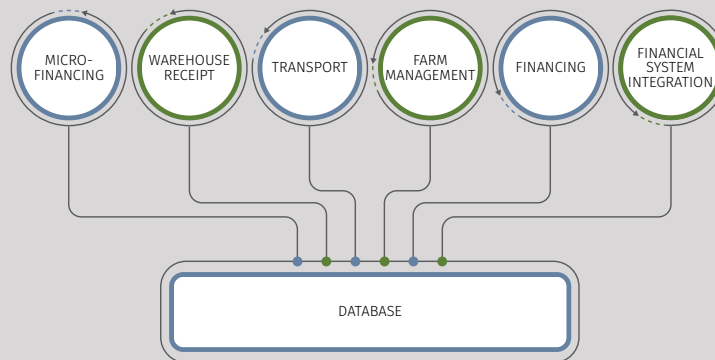

The **farm management application** allows the user to load budgets and actual spending values for multiple entities and multiple farming operations per season. The budget is used as a reference, and the system enables the “real-time” evaluation of the actual spending and sales of the farming operation with the budget. Various reports can be run to evaluate the productivity and profitability of a farming operation and compare the profitability of multiple farming enterprises and operations. This allows the users to make proactive, “real-time” decisions to optimise their operations.

FINANCING

The **financing application** provides the capturing and management of loan accounts for clients, including instalment calculation, management of overdraft accounts and storage of sensitive financial information.

FINANCIAL SYSTEM INTEGRATION

The **financial system integration application** enables the user to integrate the data captured in APPSolve Agri applications with other systems, like financial systems. This ensures the data is captured only once in a single institution and ensures data correctness and efficient use.
